The health implications of dental aerosols have been a concern to the dental profession for some time. However, with the recent outbreak of Covid 19, aerosols are now a major concern.

Located in the Georgian Quarter of Liverpool, the Chris Mercier Dental Practice is a thriving, modern and innovative dental surgery. During the Covid 19 lockdown, Dr Mercier decided to invest in an aerosol extraction system for his two dental surgeries, minimising any risk to his staff and patients.

Fumex Ltd were approached by a leading dental equipment supplier to design and install the aerosol extraction system before the practice could reopen. This system consisted of two 2.1 metre extraction arms, high quality galvanised steel ducting and two centrifugal fans with silencers, both externally mounted. The extraction arm is ceiling mounted in the larger surgery and wall mounted in the second surgery, to provide both flexibility and ease of use. The extraction system is vented to atmosphere via a high velocity jet cowl.

"We did encounter a few installation issues due to the structure of the Georgian building, but working closely with Dr Mercier allowed our experienced engineers to overcome all of these difficulties. I would like to thank Chris and his team for their help and co-operation during the installation, and wish them all a safe and prosperous future."
Dave Brown - Sales Manager - Fumex Ltd

One additional benefit of aerosol extraction is the system will provide extra air room changes, this helps to further minimise any exposure risk.

"I installed the Fumex aerosol capture system in my practice during lockdown. Fumex Ltd were professional and patient in what was a challenging installation due to the age of my premises."

"Having the aerosol capture system in place has provided piece of mind for my staff, my patients and myself. The aerosol capture system, in combination with the appropriate PPE, has allowed me to provide a full range of dental treatment safely for my patients during these difficult times."

"I am happy to recommend Fumex aerosol capture system to any of my colleagues."
