*DOP Testing (Dispersed Oil Particulate)*

Cost Effective Solutions

## DOP Testing

DOP (Dispersed Oil Particulate) Testing is a procedure to validate the integrity of a HEPA (High Efficiency Particulate Air) filter. Our fully trained engineers can test all types of LEV equipment containing a HEPA filter.

Fumex Ltd only use the very latest calibrated equipment. This includes an Aerosol Generator to produce a sub-micron aerosol to international standards;- BS 5295, ISO 1822, ISO 14644-9 and a state-of-the-art Digital Aerosol Photometer.

The test involves an aerosol of oil particles being drawn into the LEV system or unit, upstream of the HEPA filter. Using a calibrated photometer, we then record any particles downstream to determine the HEPA filter efficiency and this also checks for any leakage of filter seals etc.

-  We test throughout the UK.
-  Highly competitive testing rates.
-  Professional service by fully trained engineers.
-  Fully calibrated equipment.

With many company insurance policies now stating that all LEV (with HEPA filters) require validation of the integrity of the HEPA, Fumex Ltd can provide a cost-effective DOP Test to ensure compliance to all your policy regulations.

For further details or to book a DOP Test, please call 0114 234 1114 or email: [info@fumexltd.co.uk](mailto:info@fumexltd.co.uk)
